[Safety Container Products](#) > [Safety Containers For Laboratories](#) > Nonmetallic Safety Cans for Laboratories

Nonmetallic Safety Cans offer reliable dispensing for even the most corrosive liquids.

Nonmetallic Laboratory Safety Cans have all the benefits of Justrite's Type I polyethylene safety cans, with the addition of a self-closing faucet for easy dispensing. All fill spouts have a pressure relief cap with flame arrester, and 5-gallon models also feature a built-in vacuum breaker. Justrite's unique current-carrying carbon insert imbedded into the container allows for proper grounding.

Nonmetallic Shelf Cans have a faucet that is mounted two inches above the bottom to eliminate lifting the cans during dispensing.

Nonmetallic Tilt Cans have faucet on top and the can rests in a sturdy metal cradle.

Nonmetallic Safety Cans with Pump offers precise, controlled dispensing. The pump threads into the .75" opening of the dome of the can and delivers approximately 3.5 ounces per full stroke.
