

#### **ERGONOMICS PROGRAM**

#### 1. PURPOSE

1.1. The University of Notre Dame's Ergonomics Program establishes a formal process to improve the overall health and safety of faculty and staff by preventing work-related injuries caused by musculoskeletal disorders (MSDs). This is accomplished by eliminating or reducing the risk factors that cause MSDs.

## 2. SCOPE

2.1. This applies to all University of Notre Dame personnel in all work operations, including workstations and office areas.

#### 3. DEFINITIONS

- 3.1. **Ergonomics:** the scientific discipline concerned with the understanding of the interactions among humans and other elements of a system, and the profession that applies theory, principles, data and methods to design in order to optimize human well-being and overall system performance. It can be described as fitting the job to the person rather than forcing the person to fit the job.
- 3.2. **Ergonomic Risk Factors:** Include repetition, force, awkward postures, static postures, contact stress, vibration, cold temperatures, hot temperatures, insufficient recovery, and psychosocial.
- 3.3. **Ergonomic Stressors/Hazards:** Any condition that poses a biomechanical stress on the human body associated with an increased risk for developing musculoskeletal disorders.
- 3.4. **Musculoskeletal Disorder (MSD):** disorders of the muscles, nerves, tendons, ligaments, joints, cartilage and spinal discs. MSDs do not include disorders caused by slips, trips, falls, motor vehicle accidents, or other similar accidents.
- 3.5. **Work-related MSDs:** Work activities or conditions (such as job tasks, workstation design, etc.) where ergonomic stressors are present that are reasonably likely to cause or contribute to an MSD.

#### 4. RESPONSIBILITIES

- 4.1. Notre Dame Wellness Center (NDWC) Occupational Health Nurses:
  - 4.1.1. Scheduling and completing departmental ergonomic assessments with requesting departments.
  - 4.1.2. Scheduling and completing ergonomics training with requesting departments.
  - 4.1.3. Scheduling and completing office ergonomics assessments with requesting faculty and staff.

Approval Date: September 2020 Ergonomics Procedure OCC04
Revision Date: Page 1 of 9 Owner: RMS Director

- 4.1.4. Providing documentation and any recommendations from the ergonomics assessment to the employee and their supervisor.
- 4.1.5. Conducting ergonomic assessments in response to ergonomic related injuries on campus.
- 4.1.6. Implementing stretching programs within departments across campus.
- 4.1.7. Documenting ergonomic assessments and training sessions.
- 4.2. Risk Management and Safety (RMS):
  - 4.2.1. Identifying specific ergonomic risk factors and their cause through analysis and evaluation of specific work tasks and workstation setups.
  - 4.2.2. Assisting in the development and implementation of solutions to reduce risk factors for work-related injury and illness.
  - 4.2.3. Developing online training resources for faculty and staff on ergonomics.
  - 4.2.4. Forwarding any ergonomic recommendations made by a medical professional for an employee to the Office of Institutional Equity.
  - 4.2.5. Ensuring all ergonomic evaluations and training sessions are documented
- 4.3. Notre Dame Faculty and Staff:
  - 4.3.1. Reporting MSD symptoms to a supervisor.
  - 4.3.2. Requesting an ergonomic evaluation even before symptoms occur if you feel that a workstation, equipment or job task is harmful by contacting the NDWC Occupational Health Nurses. This evaluation could prevent the onset of symptoms or rule out the existence of ergonomic stressors/hazards.
  - 4.3.3. If in need of medical treatment, schedule an appointment at the NDWC.
- 4.4. Notre Dame Departments:
  - 4.4.1. Identifying potential ergonomic stressors/hazards.
  - 4.4.2. Contacting the NDWC for evaluation of identified ergonomic stressors/hazards.
  - 4.4.3. Providing sufficient resources to implement ergonomic recommendations in a timely manner if feasible.
  - 4.4.4. Implementing stretching programs as needed.

#### 5. PROCESS

- 5.1. Workplace designs and job tasks requiring assessment shall be identified through requests for assessment, injuries, RMS inspections, and discovery of ergonomic risk factors.
- 5.2. Ergonomic assessments shall be scheduled by the NDWC when workplace designs and job tasks requiring assessment are forwarded to them.
- 5.3. Office workplace design assessments shall be documented on the Office Form (See Appendix A). The Office Form and any recommendations from the NDWC shall be provided to the employee and supervisor.
- 5.4. Job task assessments shall be documented on the REBA Form (See Appendix B) or the RULA Form (See Appendix C) depending on the job task being assessed. The REBA or RULA Form and any recommendations from the NDWC shall be provided to the employee, supervisor, and RMS.

Approval Date: September 2020 Ergonomics Procedure OCC04
Revision Date: Page 2 of 9 Owner: RMS Director

- 5.5. Office, REBA, and RULA Forms shall be uploaded into the Ergonomics folder in Google Drive by RMS.
- 5.6. If associated with an incident, Office, REBA and RULA forms shall be attached to the investigation in OnBase.
- 5.7. All assessment information shall be documented in the <a href="Ergonomic Assessment Matrix">Ergonomic Assessment Matrix</a> by RMS. Workplace design and job hazards along with controls and recommendations implemented are documented in the Ergonomic Assessment Matrix.
- 5.8. As jobs with ergonomic risk factors present themselves, RMS and the NDWC may incorporate training sessions for specific departments in order to reduce and control risks and prevent onset of work related MSDs.

#### ERGONOMIC INTERVENTION

- 6.1. When an ergonomic hazard has been identified, RMS and the NDWC shall work together with the department and employee to eliminate or reduce the cause of the ergonomic hazard in order to reduce the chance for injury for existing or future employees.
- 6.2. There are two general approaches to controlling ergonomic hazards: Engineering and Administrative.
  - 6.2.1. Engineering Controls Changes made to the workstations, tools, and/or machinery that modify the physical makeup of the area or process. This may include, but is not limited to, implementing a scissors lift table, hoist system, conveyor belt, ergonomic pipette, carts or other devices or pieces of equipment to the work environment.
  - 6.2.2. Administrative Controls Changes made to reduce exposure without making physical changes to the area or process. This may include taking frequent breaks and/or job rotations. Moving workers from one area to the next can help reduce fatigue and stress on the body and help reduce injury risk.
  - 6.2.3. Engineering controls are preferred as their goal is to reduce the presence of hazards rather than to adjust the employee around the hazards. Administrative controls can be used in combination with others but should not be used as the only control for an ergonomic hazard.

#### 7. TRAINING

- 7.1. The NDWC Occupational Health Nurses can provide ergonomics training upon request.
- 7.2. An ergonomic training course is available in complyND and can be assigned as needed.
- 7.3. NDWC Occupational Health Nurses conducting ergonomic assessments are Certified Ergonomic Specialists.

### 8. FREQUENCY OF REVIEW

Approval Date: September 2020 Ergonomics Procedure OCC04
Revision Date: Page 3 of 9 Owner: RMS Director

- 8.1. This procedure shall be reviewed triennially and updated as needed.

## Computer Worksta, on Evaluation Checklist

WORKING POSTURES—The workstation is designed or arranged for doing computer tasks so it allows y		-
	our: Yes	No
1. Head and neck to be upright, or in-line with the torso (not bent down/back). If "no" check Monitors, Chairs and Work Surfa	tes.	
2. Head, neck, and trunk to face forward (not twisted). If "no" check Monitors or Chairs.		
<ol> <li>Trunk to be perpendicular to floor (may lean back into backrest but not forward). If "no" check Chairs or Monitors.</li> <li>Shoulders and upper arms to be in-line with the torso, generally about perpendicular to the floor and relaxed (not elevate stretched forward). If "no" check Chair.</li> </ol>	l or	
5. Upper arms and elbows to be close to the body (not extended outward). If "no" check Chair, Work Surface, Keyboard, and 6. Forearms, wrists, and hands to be straight and in-line (forearm at about 90 degrees to the upper arm). If "no" check Cha Pointer.		
7. Wrists and hands to be straight (not bent up/down or sideways toward the little finger). If "no" refer to Keyboards, or Poin 8. Thighs to be parallel to the floor and the lower legs to be perpendicular to floor (thighs may be slightly elevated above kneeder to Chairs or Work Surfaces.		
9. Feet rest flat on the floor or are supported by a stable footrest. If "no" refer to Chairs, Work Surfaces.		
Notes:		
		_
SEATING-Consider these points when evaluating the chair:	Yes	s No
10. Backrest provides support for your lower back (lumbar area) and if needed, the upper back (thoracic area).		
11. Seat width and depth accommodate the specific user (seat pan not too big/small).		
12. Seat front does not press against the back of your knees and lower legs (seat pan not too long).		
13. Seat has cushioning and is rounded with a "waterfall" front (no sharp edge).		
14. Armrests, if used, support both forearms while performing computer tasks and they do not interfere with movement.		
No answers to any of these questions should prompt a review of Chairs. Can the chair be adjusted to fit the clien	1?	
Notes:		
KEYBOARD/INPUT DEVICE-Consider these points when evaluating the keyboard or pointing device. T keyboard/input device is designed or arranged for doing computer tasks so the:	ne Yes	No
15. Keyboard/input device platform(s) is stable and large enough to hold a keyboard and an input device.		
and the state of t		
16. Input device (mouse or trackball) is located right next to the keyboard so it can be operated without reaching.
